

Mac · Daisywheel · Connection™

The Mac-Daisywheel-Connection creates an entirely new aspect to the Apple Macintosh™, that allows the Macintosh to print with any popular daisywheel, letter quality printer. The Mac-Daisywheel-Connection supports: Apple Daisywheel Printer, Brother HR15, HR25, or HR35, C. Itoh Starwriter, Comrex CR-II, Daisywriter, Diablo, NEC 2010, Qume LetterPro 20s, Qume Sprint II... just to name a few!

With any of these printers and the new Mac-Daisywheel-Connection, Macintosh can deliver true letter quality output. This application program is ideal for business correspondence, reports, legal documents and even spread-sheets (most daisywheel printers offer a wide carriage model). With the Mac-Daisywheel-Connection up to 15" paper width can be printed.

This powerful Applications program was developed by the authors of MacWrite™. The Mac-Daisywheel-Connection is straightforward and easy to use, maintaining the visual fidelity of the file, even when text and graphics are mixed.

The program supports 10 pitch, 12 pitch, 15 pitch and proportional printwheels of various font styles. The Mac-Daisywheel-Connection works beautifully with MacWrite and Multiplan™, as well as other software products for the Macintosh. The Mac-Daisywheel-Connection is loaded with features such as boldface, and underline, sub script and super script. The Mac-Daisywheel-Connection comes complete with the program disk, quick start-up guide and the printer/Macintosh interface cable. The Mac-Daisywheel-Connection is as easy to use as the Macintosh mouse. Just point and print!
